

PART 1

- 1.C
- 2.B
- 3.C
- 4.A
- 5.C
- 6.A
- 7.C
- 8.C
- 9.C
- 10.D
- 11.B
- 12.A

PART 2

- 13.
 - A. $1.2/0.4 = 3.0$
 - B. $400/3 = 133 \text{ N}$
 - C. Friction of the fulcrum or weight of the lever arm
- 14.
 - a. $6 \times 0.8 = 4.8$
 - b. $600/4.8 = 125 \text{ N}$
 - c. The efficiency is less than 100 due to friction of pulleys and axles and weights of the rope
- 15.
 - a. $5/1.25 = 4.0$
 - b. $490/4 = 122.5 \text{ N}$
 - c. **612.5 J** in both cases
- 16.
 - a. $120 \times 4 = 480 \text{ J}$
 - b. $360 \times 1 = 360 \text{ J}$
 - c. $360/480 = 75\%$
- 17.
 - a. Possible answers are: **pulley + lever, inclined plane + pulley, screw + wheel and axle**
 - b. Combining simple machines multiplies mechanical advantage, reducing force but increasing distance
 - c. Increasing mechanical advantage increases the distance needed to apply force over to achieve the same amount of work, also can be increased friction, or increased complexity
- 18.
 - a. **Tan 30**
 - b. $3 \times 0.5 = 1.5 \text{ N}$

- c. The angle would **not change**
